

**The future of grain storage management.  
Remote access with your mobile technology - anywhere, anytime.**

OPI introduces OPI BLUE – a wireless system that deliver instant grain storage information to your smart phone, tablet or computer. No more driving to your bins to plug in. You can access your critical grain storage information wherever you work, live or play. OPI BLUE can be incorporated into your current OPI grain management system using existing cabling or be purchased as a new system.

OPI BLUE management features:

- Temperature
- Grain inventory levels
- Moisture
- Ambient conditions
- Insect activity

OPI BLUE gives you peace of mind because OPI BLUE monitors your grain 24/7 and alerts you as soon as your grain starts to trend out of condition. Best of all OPI BLUE has been designed around ease-of-everything:

- Easy to install and configure
- Easy to service
- Easy to use
- Easy on the pocket-book

OPI-BLUE is brought to you by OPIsystems Inc., the market leader in advancing grain storage management and securely installed solutions for a broad range of storage applications.

**The OPI BLUE System consist of:**

- A Cable Node mounted atop each bin, complete with solar-charging and wireless data transmission capabilities.
- A centrally located master device called a Gateway that collects and stores information from the Node network, then transmits this information to your mobile device.
- The mobile App also provides a permanent record of your data, with the ability to review this information off-line.
